

IMMUNOLOGY FOR OCCUPATIONAL LUNG DISEASE

Providing a professional, specialist immunological service for the diagnosis of occupational lung disease in close collaboration with clinical colleagues from Royal Brompton and Harefield Hospital.

The laboratory specialises in measuring specific IgE to all occupational allergens including those not commercially available, creating where necessary unique assays for each individual case.

- Specific IgE and IgG assays for occupational allergy and asthma
- Bespoke assays for novel allergens
- Beryllium lymphocyte proliferation testing
- Research and development of new diagnostic assays
- Specialist advice on diagnostic assays and interpretation of results
