

## How do I use a peak flow meter?

Scan the QR code to your left to load a video on how to use the peak flow meter. If this doesn't load, you can also type the following link into your browser:  
<https://youtu.be/baLYBXcqlmk> You can also phone the clinic nurse on 0207 594 3177 to arrange a video call to explain how to do the test.

- 1) **Measure your peak flow every 3 hours when awake**, starting as soon as you wake up and throughout the day until you go to bed. You may find it helpful to set an alarm to remind you.
- 2) If it is safe for you to do so, always measure every peak flow whilst **standing up**.
- 3) **Pull the pointer (red arrow) back to the start before every blow**. Ensure not to obstruct the scale with your hand.
- 4) Take a deep breath in, make a tight seal with your mouth around the mouthpiece, then blow as **hard and as fast as you possibly can** into the meter.
- 5) Note which number the arrow is pointing to on the scale, to the **nearest 10 units**.
- 6) **Do this 3 times in a row** so you get 3 scores each time (all 3 scores should be roughly the same). **Write down the highest of the 3 readings** in the appropriate time slot on your chart.

Please remember:

- Always measure your peak flow before taking any inhaler.
- Make measurements every day of the week during the full measurement period (usually four weeks, depending on advice from the clinic). This includes weekends and holidays.
- If you forget to do a reading, leave that space blank.
- Please fill the chart correctly and as much as you can. This includes your name at the top of each sheet (and hospital number if you have one); your height; the times you start and finish work on each day; any relevant treatment e.g. inhalers you have taken each day; and any materials you have been exposed to each day.
- You can wash the mouthpiece with warm soapy water if needed.

## How do I send my peak flow diary to you?

Scan/photo and email to: [gstt.OCLDAdmin@nhs.net](mailto:gstt.OCLDAdmin@nhs.net) or text/WhatsApp **07977 352 164**
